

FROM ITALIAN TO DANISH SCHOOL

A few days ago, our school group took a virtual journey through the photos taken by our teachers Mrs. Vendola and Mrs. De Lucia, after their experience in Klovermarkskolen, Haderslev. They showed us the special school environments and facilities: the swimming pool, the football field, the volleyball court, the tennis table and a spacious gym with a lot of sports equipment! There is also a multimedia classroom to do sports: there are some exercise bikes connected to a virtual reality viewer that shows the way to be travelled as if you are in the real environment. Another Danish highlight is represented by some large green areas where children play fair and do sports freely.

In addition students take the bus or cycle to school in order to make their city more sustainable. In the school halls you can find free dispensers of fresh water and in the classroom you can see some printers, computers and special shelves where students must put their smartphones before the lesson.

They take care of eco-sustainability and recycling, in fact in the outdoor spaces there are swings whose seats are the car tires.

The cinema room offers the students the possibility to watch films in comfort.

At school, teachers can use a kitchen to prepare their own snacks during their breaks.

Our teachers participated to the "Stafet for livet" event too, where they were involved with pupils, volunteers and some Danish inhabitants to decorate the tents in order to support the fight against cancer both economically and psychologically. People were selling typical sweets and homemade products.

We dreamt for a while, enchanted by the photos and the descriptions, and eager to visit Haderslev and its school!
